Opis produktu

7m Type 2 EV-Charging Cable, 11kW.

Quickly recharge your E-Vehicle or Plug-in-Hybrid with the Lindy Type 2 cables. With this charging cable you can recharge any vehicle, fitted with a Type 2 port, at a public charging station or wall box. As Type 2 is standard in the EU, you can use this cable at most charging stations in the European area. 3-phase charging with up to 11kW (16A 480VAC) is possible as well as 1-phase charging. The cable is well protected against dust and water (IP55), it is UV-resistant and the connectors are flame retardant (UL 94 V-0). The plugs are designed for more than 10,000 mating cycles, which means a lifespan of more than 10 years with daily use. When not in use the cable can easily be stored in the carrying bag which is supplied with the product. This product has been certified by TÜV Rheinland
