Opis produktu

The Nitecore MH27UV has a maximum output of 1000 lumens from the Cree XP-L HI V3 and is powered by either 1 x 18650 Li-ion, rechargeable battery or 2 x CR123 single use batteries.

Boasting four brightness levels plus a red and blue LED, the most notable function of the torch is a 500mW 365nm ultraviolet LED that is ideal for petrol inspection, mine exploitation and forensic science. The UV is preferable for experts in geological appraisal, document examination and currency detection.

As with the MH27, the UV version utilises the same Cree XP-L HI V3 LED which casts a powerful beam, capable of reaching across great distances at double the intensity. The torch is rechargeable, making it convenient for use, storage and charging as the 18650 battery can be charged inside the torch using the included Micro USB cable. This means an external charger is not required, which makes for lighter, easier use.
